

Weighing Transmitters

Field Weighing Transmitters

Description:

GM8802D weighing transmitter is specially designed for weight transmitting in the industrial control fields. The instrument has flawless IP65 case with built-in junction box inside, allowing it to perform under the worst industrial environments and offering the best value for the same high quality and advanced filtering. It can be widely applied to concrete and bitumen mixing equipment, metallurgy furnace and converter and chemical industry, etc.

Key Features:

- CE approved
- IP65 casing allows performance in the worst industrial environment
- Used in systems with PLC/PC
- Powerful 32 bits ARM technology CPU makes it exceptional precise and responsive
- Selectable analog output forms: 0-20mA, 4-20mA, 0-5V, 0-10V or 1-5V, 1~10V and self-defined output range
- Build-in junction box
- 24 bit Delta-Sigma A/D conversion with 8 Million counts internal resolution
